

Nik Gabrič

About me

Software engineer with experience in full-stack development, frontend engineering, DevOps, and project coordination. Experienced in working within both small startup teams and larger engineering organizations.

Personal

Nik Gabrič
nationality: Slovenian
born: 1998

Areas of specialization

- Computer science
- Full-stack engineering
- Project management

Interests

Sports: Cycling, running, hiking and disc golf
Games: Board games and PC games
Music: Guitar, singing and visiting concerts

EXPERIENCE

2019–2023

Computer scientist

STUDENT POSITION - PART TIME · Stelem d.o.o., Žužemberk 
At Stelem I planned and developed a full-stack information system for a production company, and provided ongoing IT support and infrastructure maintenance for internal systems and employees.

Tech & skills: Javascript, Vue.js, Node.js, Go, Python, PostgreSQL, Docker, Self-hosting, Project management.

2022–2023

Full-stack developer

STUDENT POSITION - FULL TIME · Devleet d.o.o., Ljubljana 
Worked within a small engineering team delivering a range of client projects across web and dashboard products, including a period of contractor work for an established cryptocurrency exchange.

Tech & skills: TypeScript, Angular, Vue.js, Svelte, Node.js, Express, Rust, PostgreSQL, AWS.

2023–2025

Frontend engineer

FULL TIME EMPLOYMENT · Landis+Gyr EV solutions, Ljubljana & Škofljica 

At Landis & Gyr EV solutions I was part of a frontend team developing and maintaining an EV charging platform and energy management system. My team planned and started the migration of the system to a new and modern stack from the legacy codebase, substantially improving customer satisfaction and significantly reducing support call volume.

Tech & skills: TypeScript, React, Next.js, AngularJS, C#, .NET, Splunk.

2025–2026

Full-Stack engineer

FULL TIME EMPLOYMENT · Vabisabi d.o.o., Ljubljana 
At Vabisabi I worked as a full-stack engineer across a range of client projects for companies based in Slovenia and across Europe, spanning web platforms, mobile applications, and AI-powered systems — from architecture and implementation through to delivery.

Tech & skills: TypeScript, React, Next.js, Flutter, Dart, Python, Firebase, PostgreSQL, MSSQL, Docker, Genkit, Project management.

PROFESSIONAL SKILLS

Frontend

Vue.js, React, Svelte, AngularJS, NextJS

Backend

Node.js, Express, .NET Core, Cloud Functions

Languages

TypeScript, Go, Rust, C#, Python

Databases

PostgreSQL, MSSQL, Firestore

Infrastructure

AWS, Firebase, Linux, Docker, Docker Compose

AI

Genkit, Knowledge Graphs, RAG, LangSmith

Tools

Git, Agile methodologies, Linear, Jira

PROJECTS

Admin information system	I planned, designed and implemented a centralised full stack information system for internal use.
Company website	I collaborated with the design team and developed a presentational website for a software development agency I worked for at the time.
Crypto currencies trading platform	I Developed frontend components and user interfaces for a cryptocurrency trading platform, focusing on security, usability, and real-time data visualization.
Educational platform	I planned and developed a web based dashboard for an educational platform which included coordinating separate development teams (design, mobile, backend, frontend).
EV charging solution	I maintained and developed new features for an electric vehicle charging platform. Planned and developed a new product on updated and newer tech stack.
Real estate rental app	I developed the customer facing web app and backoffice for a real estate rental platform used by a company renting out commercial spaces to stores and offices.
Mobile app	I developed a mobile app for a consumer product, improving its BLE connectivity and adding new features, including an AI conversation agent with a specialized knowledge base. I also set up and integrated a CMS for managing and publishing content consumed by the app.
AI knowledge ecosystem	I designed and developed components of an AI knowledge platform, including knowledge ingestion pipelines, a knowledge graph, a centralized knowledge base, and a conversation agent. The system provided automated knowledge extraction, semantic data modeling, and AI-assisted information retrieval with reasoning.

EDUCATION

- **High school graduate**
Splošna gimnazija Novo mesto 
- **Computer and Information Science Bachelor's degree**
University of Ljubljana, Faculty of Computer and Information Science 
Bachelor's Thesis: Development of an information system for production company needs

LANGUAGES

Slovenian	mother tongue
English	B2
